Operations Manual - Organizing and Maximizing Our Work

Building knowledge and a community by efficiently handling issues

Handling issues and PRs

In a nutshell, every issue and PR should get tagged by one of our core team and routed to the person who specializes in the related topic. This person then, will warmly welcome the contributor and then kick off the discussion (hopefully within 48 hours). The goal of each issue/PR is to learn new thing that might improve our repo and try to include the contributor in our army.

There is no specific person on call who assigns inquiries rather we count on our core team to visit almost everyday and assign issues/PR - this way, the workflow is not depend upon any specific person rather on our entire team.

Any new content should conform to our writing guidelines

Monthly maintenance

Each month, a maintainer on call will open an issue for a maintenance work checklist and write down all the actions to perform by the end of the month (e.g. assign flower to a contributor). At the end of the month, that maintainer will perform the tasks on the checklist.

Maintainer on call: @someone

Updates

- [x] Update top badges with best practices item count, last update date and Node.js version
- [ ] Ensure all translations are aligned with the English version

- [x] Update 'thank you' stars & flowers
- [x] Notify and thanks the contributors of the month

Flowers

- @someone2
- @someone1

Stars

- @someone1

Core Team

- @someone1

--

Month	Maintainer on call
10/2019	Yoni
12/2019	Bruno
02/2020	Kyle
04/2020	Yoni
06/2020	Bruno
08/2020	Kyle
10/2020	Yoni
12/2020	Bruno

Routing by areas of expertise

Topic	Examples	Assignee
Code standards and fixes	Code typos, code standards, examples refinements	Bruno
Translations	Adding new language, merging language PRs	Monthly rotation October - Yoni
General Writing quality	Typos, text clarify	Bruno
Javascript runtime	JS runtime, syntax correctness	Sagir
Devops	Monitoring, hardening a production site, deployment	Kyle
Architetecture	Project structure, microservices	Yoni
Testing	CI, linting, testing	Yoni
Performance	Efficient code, inspecting processes on fire	Sagir
Security	Security packages, secured code	Kyle
General inquires	Ideas, requests to contribute, etc	Monthly rotation October - Bruno
Error handling	...	Yoni

Routing of languages under translation

Language	Assignee
Brazilian Portuguese	Bruno
Portuguese	Kyke
Hebrew	Yoni
German	Bruno
Italian	Kyle
Turkish	Bruno
French	Yoni
Russian	Yoni
Korean	Yoni
Spanish	Kevyn
Chinese	Yoni
Korean	Kyle
Egyptian	Yoni
Ukrainian	Bruno
Polish	Kevyn
Thai	Kevyn

Contribution guidelines

Lovely & friendly atmosphere

Our code of conduct is 5 words long: we are all friends here

We recognize that being professional and kind are the same thing and strive to maximize our professionalism

Handling issues and PRs

In a nutshell, every issue is an opprtunity to gain new knowledge and attract new contributor. Therefore we aim for vast response and welcoming words 💚

When merging a new PR, add the contributor to our credits list using the all-contributors bot. Just include this text as a PR comment:

```
@all-contributors please add @username for content
```

The specific PR/issue resolustion depends on its kind:

A. New best practice or fundamental changes to existing content - In that case, involve at least 1 other members to solicit enough feedback for this change. Start by greeting the contributor, ensure the formalities are fine, ensure it conforms to our writing guidelines, ensure enough information was provided and then get at least 1 more collaborators and allow at least a week for comments

B. Plain text change (e.g. Grammar correctness) - When super-simple wording edits are proposed (i.e. not new content rather language correctness), one can just greet, approve and merge immediately

C. Translations to a new (not existing) language - When offered to add new language, greet the person and paste our translation guidelines

D. Edits to existing translations - If the change can be inferred by the reviewer (e.g., a change of a symbol, number or just date update) then feel free to merge alone. If familiarity with the language is needed, tag the original translator and ask

for feedback. The translators name can be found in the home page under "Translations"

D. Dicussions and ideas - When a technical discussion or just general conversation is brought into a new issue, apply your own judgements whether to tag other collaborators

Assets to be aware of

- Our content writing guidelines can be found here
- Common questions and answers to issues/PRs can be found here

Precommit

Before pushing, verify your Markdown passes the linter :

```
npm run lint
```

For example fix basic errors :

```
npm run lint --fix
```

Contribution model

Steering committee 🏆

Members of the steering committee work together to provide guidance and future direction to the project. Each committee member has a particular expertise which they share their knowledge on, and work to lead further improvements to the project in that area. The steering committee members are responsible for approving new best practices, and ensuring current best practices remain relevant.

Collaborators 👍

Collaborators are members who are contributing to the repository on a regular basis, through suggesting new best practices, triaging issues, reviewing pull requests and more. Along with the steering committee, each collaborator leads a project tracked under our Github projects.

The role is in place to help the steering committee ensure that the content provided is of high standard, up-to-date with the industry, and available in many languages. Members who frequently participate in these activities will be invited to become a collaborator, based on the quality of their contributions.

The steering committee periodically reviews the collaborator list to identify inactive collaborators. Inactive collaborators can choose to either continue in or step down from their role, in which case they are acknowledged as a past collaborator. They may later request that the steering committee restore them to active status.

Welcoming new translators

@name - Welcome aboard, it's great to have you here! 

Having A Slovak translation could be awesome! At the end, we can Tweet about this, put in our news section, include your name at the top of the translated language and also at the main home page contributors list.

Let's go for this? Few basic guideliness:

- Work on your own fork - Fork this repo, create a branch for yourself, translate & collaborate with other translators, then finally when ready create a PR.
- Focus on translation, not content editing - The focus is on translation, should you want to modify the content or the graphics - let's PR first in English and then translate to other languages. Also the format of the text should remain intact (same design).
- Duplicate the readme and the inner pages - The content should be translated over a page duplication. readme.md became readme.{translated-language}.md (e.g. readme.french.md), all other files should be duplicated similarly. So the number of English & translated pages should be the same. You may see examples in currently translated languages.

Collaborate - once you do the basic setup (branch, duplicate pages), we can announce the work on a new language and get others involved and help you in translation (if you wish).

We're here to help - let us know whether we can do anything to support you. We can Tweet about this work, put homepage banner or anything else.
